EXP 14: Frequency Distribution of Customer Ages

AIM

To calculate the frequency distribution of customer ages using Pandas.

ALGORITHM

1. Import Pandas.
2. Enter customer ages.
3. Create a Pandas Series.
4. Display the frequency of each age.

SHORT CODE

EXP 14 – Customer Age Frequency

```
import pandas as pd

ages = list(map(int, input("Enter ages: ").split()))

print(pd.Series(ages).value_counts().sort_index())
```

INPUT

Enter ages: 20 25 20 30 25 20

OUTPUT

```
========== RESTART: C:/Users/arunp/OneDrive/Documents/FDS/EXP 14.py =======
Enter ages: 20 25 20 30 25 20
20    3
25    2
30    1
Name: count, dtype: int64
```

RESULT

The frequency distribution of customer ages was calculated successfully.
